

Environmental policy

Environmental protection and the responsible use of resources are of particular concern to DKV. They are consistently and sustainably promoted by the company and embraced as part of its management culture. We see the observation and implementation of our environmental policy and the associated measures in conjunction with our Corporate Social Responsibility (CSR) as a competitive advantage to and a driver of innovation within our company.

It is our objective to operate sustainably at all times and take into account all ecological, commercial and social aspects of our operations. To ensure that we achieve this objective, we have set recurring ambitious and measurable targets relevant to CSR, which we examine and evaluate at regular intervals.

The environmental effects arising from our business activities are analysed and the required appropriate measures derived from the results. We continuously and systematically strive to optimise our environmental performance.

We are fully committed to the environment and the promotion of new technical developments and responsible behaviour, not least by cooperating with our partners in the annual presentation of the Eco Performance Award.

We motivate our business and cooperative-venture partners to work within comparable guidelines and to actively drive forward environmental protection and resource conservation. We are entirely open about our approach and our performances.

Our values (with respect to environmental protection):

- We treat resources responsibly.
- We consider the load on the environment and observe safety regulations.
- We fulfil the obligations we have placed upon ourselves and do more than the law demands.
- We accept responsibility for the world in which we live and for the people with whom we work.

Our company's management together with all employees is committed to realising and observing the environmental policy.
